Memory crunch hammers down smartphone shipments

Global smartphone shipments declined 6% YoY in Q1 2026, as DRAM and NAND shortages disrupted supplies and increased costs, according to Counterpoint's latest numbers.

Preliminary estimates from Counterpoint Research's Market Monitor pointed to the overall market sentiment remaining cautious driven primarily by a shortage of DRAM and NAND memory components and weaker demand. Essentially, the vortex of AI data centre construction is sucking in memory products in the same way it did GPUs, meaning there's less about for consumer electronics.

OEMs have adjusted their pricing and production strategies, such as delaying products and doing fewer launches, and consumers held back on spending "amid Middle East tensions."

Meanwhile some OEMs frontloaded shipments in anticipation of component price hikes and logistics getting more expensive, which actually offset an even bigger drop in shipments, we're told.

In terms of the OEM rankings, Apple claimed a win by leading the market for the first time for a Q1, clocking 21% market share and 5% YoY growth in Q1. Thanks to its premium positioning and highly integrated supply chain, Apple remains the most insulated brand against the memory crisis, said Counterpoint.

What also helped was the popularity of the iPhone 17 series, aggressive trade-in programs, and ecosystem

stickiness, all of which "drove overall volume growth despite a softer macro environment." It also enjoyed stronger growth in several key Asia-Pacific markets, such as China, India and Japan.

Less fortunate was Samsung whose shipments declined 6% YoY in Q1, with a 20% market share. The brand suffered some weaker demand in the mass-market segment and a delay in the S26 series launch – though the report notes early momentum of the S26 series remained strong. To mitigate some of the aforementioned rising cost pressures, Samsung apparently adjusted its product portfolio, "streamlining entry-level options and emphasizing higher-tier configurations, effectively raising starting prices while reinforcing the premium positioning of its devices."

Meanwhile third place Xiaomi dropped the highest among the top five brands at 13% YoY – we're told since it has heavy exposure to the price-sensitive entry-level segment, that makes it highly vulnerable to the rising memory costs. OPPO and vivo took the fourth and fifth spots, and both also suffered shipment declines.

Further down the rankings Google and Nothing were called out for some wins. Google managed a 14% YoY growth in shipments, and Counterpoint says its Pixel lineup "is

strengthening its presence across key mature markets, with its edge AI capabilities, computational photography, and clean, user-friendly software helping the brand gain share.”

Nothing enjoyed a 25% YoY growth, as it “continues to benefit from its distinctive design, niche positioning and growing consumer awareness, driving strong adoption in its target segments.”

“This decline in shipments is primarily driven by memory players prioritizing AI data centers over consumer electronics, leaving OEMs with compressed margins and forcing them to pass increased Bills of Material (BOM) costs directly to the consumer,” said Senior Analyst Shilpi Jain. “While supplies remained constrained, rising energy prices, higher logistics costs, and economic uncertainty driven by tension in the Middle East kept consumer sentiment for new devices low, driving demand for refurbished devices and further weighing on shipments.

“The shortage of memory chips and rising costs have impacted the price-sensitive segments the most, such as entry and mid-range devices, which are most exposed to such demand and supply pressures. While premium device makers like Apple remained relatively resilient to these pressures, volume-driven Chinese brands experienced sharper declines, especially in price-sensitive regions, contributing to the overall drop in global shipments.”

As for the future, Counterpoint’s outlook for the rest of the year remains weak, as it reckons the memory crunch may last until late 2027. It expects that OEMs will prioritise value over volume, configuration updates, cutting low-margin models, and doing more with refurbished devices to retain that lower end of the market.

“With premiumization holding steady but margins under pressure, brands will increasingly rely on software, ecosystem expansion and services for growth in the coming quarters,” it concludes.

However, opinion is divided as to the specific timing

of the memory crunch inflicted damage to the smartphone market.

According to Omdia’s numbers for the same period, the global smartphone market grew by 1% YoY – though it stipulates this does not yet reflect the full impact of rising supply-side costs since “vendor inventory frontloading in the channel temporarily supported shipments.”

It does note that memory and storage costs are increasing sharply – it estimates mobile DRAM and NAND prices rose by around 90% QoQ in Q1 and expects them to increase a further 30% in Q2 – but says that vendors have not fully implemented retail price increases across all markets. It also highlights early signs of logistics and trade flow disruption adding friction to global supply chains.

Runar Bjorhovde, Principal Analyst at Omdia said: “The worst is still ahead as cost-driven headwinds weigh on the smartphone value chain. In the near term, higher pricing is creating a demand shock, with consumers delaying purchases, before gradually adapting as pricing stabilises. At the same time, uncertainty around pricing and availability is prompting some channel partners to increase inventory, temporarily supporting shipments.

“However, this will delay rather than offset the impact for vendors, with pressure expected to intensify as the year progresses. Vendors will need to focus on margin protection, tighter portfolios and higher-value opportunities while strengthening brand and channel execution. Omdia expects the global smartphone market to be increasingly skewed to the downside in 2026, with shipments likely to decline by around 15% amid escalating costs and macro volatility.”

Either way, unless demand for throwing up data centres recedes, which doesn’t seem on the cards any time soon, the pressure on components that comes with it is going to remain.

Sony Announces the Launch of Xperia 1 VIII with Newly Integrated AI for Better Photos Every Time

Sony launched its latest flagship smartphone 'Xperia 1 VIII'. Featuring the new AI Camera Assistant powered by Xperia Intelligence, which leverages AI technology to enhance photography by suggesting helpful camera settings such as colour tones, lens selection, and bokeh effects which are optimized depending on the scene and subject. The new telephoto camera is equipped with a 1/1.56-inch image sensor, approximately four times larger than that used in the Xperia 1 VII, enabling improved delicate and highly detailed shots of distant subjects. All three of its cameras (16mm / 24mm / 70mm) deliver low-light performance comparable to that of a full-frame sensor in terms of noise reduction and dynamic range, allowing for clear imaging even in dark environments.

With the introduction of Xperia 1 VIII, Sony aims to support the joy of everyday photography and creation by enabling customers in their drive to capture better photos.

Improved Photography Experience Thanks to the

New AI Camera Assistant and Telephoto Camera

The new AI Camera Assistant powered by Xperia Intelligence is designed to make photography even more enjoyable. By simply pointing the camera at your subject, it automatically recognises the scene by combining various factors such as the subject itself and weather conditions to suggest different options for your image that include colour tones, lens effects and bokeh expressions. These recommendations are based on Creative Look that reflect Sony's unique imaging philosophy cultivated through α^{TM} (AlphaTM). With a simple tap on the suggestion, you can effortlessly achieve your desired creative expression.

In addition, the telephoto camera is equipped with a 1/1.56inch image sensor that is approximately four times larger than that of the previous model, delivering clear and detailed images even in low-light conditions. Furthermore, RAW multi-frame processing is applied to all lenses, simultaneously expanding dynamic range (HDR) and performing noise reduction in low-light conditions. This method effectively suppresses highlight clipping and shadow crushing, improving color reproduction accuracy in high-contrast scenes. Fine details with clear, sharp edges are faithfully preserved in both bright and dark areas. In addition, noise is reduced even in low-light environments, ensuring clear and crisp images.

Redesigned and Crafted to Inspire

The stunning new ORE design is inspired by natural materials with color inspiration for the four new choices originating from raw gemstones, Graphite Black, Lolite Silver, Garnet Red, and Native Gold. By incorporating a camera design that makes use of the new telephoto camera, along with newly developed processing applied to the materials used throughout the sides, back, and overall body, a unified and cohesive design has been achieved. Subtle surface textures provide a comfortable feel in the hand and enhanced grip. Xperia 1 VIII retains the famous dedicated camera shutter button which offers a photography experience similar to a dedicated camera, plus the 3.5mm audio jack continues to support high-quality audio using wired headphones, offering exceptional sound quality inherited from WALKMAN® DNA.

Advanced Full-Stage Stereo Speakers Deliver a Powerful, Immersive Sound Experience.

Xperia 1 VIII is equipped with newly developed identical left and right speaker units, to deliver further advances in stereo performance. These speakers produce deeper bass and more extended high frequencies, while creating a wider and deeper soundstage. Voices and instruments are reproduced with greater clarity and richness, making music performances and movie scenes feel as though they are unfolding right in front of you for an immersive and engaging audio experience.

Peak Performance Combined with up to Two-Days Battery Life

Powered by Qualcomm's Snapdragon® 8 Elite Gen 5 Mobile Platform, Xperia 1 VIII has improved processing speed and increased performance by 20%. From lightning-fast app launches and seamless multitasking to captivating gameplay and responsive content creation, this powerhouse platform delivers next-generation speed, performance, and efficiency.

The long battery life of up to two-days and 4 years of healthy battery can be enjoyed worry free so you can create, enjoy and relax with the reassurance you won't easily run out of charge when out and about.

In addition to everyday activities such as browsing social media and websites, Processing Optimization has also been newly applied to the usage of map apps with high power consumption, achieving further reductions in overall power usage.

A Case Designed to Protect and Harmonise

The Xperia 1 VIII can be protected with the optional case, which features a translucent material designed to enhance the device's ORE-inspired design. It also features a convenient built-in stand that supports both vertical and horizontal positioning, providing comfortable provision for video viewing. Additionally, the material is resistant to yellowing, maintaining its optimum appearance over time.

➤ Samsung to build a semiconductor testing plant in Vietnam

A number of news outlets are reporting that tech giant Samsung Electronics is planning to invest about US\$1.5 billion in Vietnam to build a semiconductor testing plant, though neither the company nor the country have formally confirmed this.

Nevertheless, a document sent to local authorities in April and reviewed by news agency Reuters indicates that the new factory, in an industrial park 60 kilometres north of Hanoi, is to start operations in November 2027. In fact construction has already begun.

This is expected to be Samsung's first chip testing factory in Vietnam, which is said to be a major player in the global semiconductor back-end industry.

Robust memory chip demand from AI data centre operators has apparently severely constrained supplies to industries such as smartphones, laptops and automobiles.

It seems, in fact, that the factory is likely to mainly focus on legacy chips. While less critical for AI supply chains, there is a shortage of these as major producers dedicate more of their production capacity to manufacturing AI chips.

The new plant would have annual capacity to deliver 153.3 billion gigabits (Gb) of dynamic random-access memory (DRAM) chips and another 255.6 billion Gb of NAND memory chips, according to Reuters' assessment of the proposal.

Few other details, such as production capacity and production timeline, have been revealed. However, the investment was apparently approved by Vietnamese authorities in March.

Also it has been reported that Samsung aims to reinvest

any profits from the project, up to about US\$2.5 billion, for a potential second factory.

Samsung is already the largest foreign investor in Vietnam; it has reportedly put more than US\$23 billion over a number of decades into multiple facilities.

➤ LATAM smartphone market grows despite memory price pressures

The Latin American smartphone market recorded 34.8 million smartphone shipments in Q1 2026, representing 3% year-on-year growth, defying broader global declines driven by rising memory component costs.

According to analyst house Omdia, the growth was largely supported by retailers building up inventory ahead of expected price increases tied to more expensive DRAM and NAND memory chips. Smartphone vendors also leaned toward lower-storage models, such as 128GB variants, to keep devices affordable and soften the impact of rising costs on consumers.

While demand for premium smartphones remained resilient, buyers in the entry-level segment faced increasing affordability pressures.

Samsung remained the region's largest smartphone vendor by shipments, recording 12.9 million units in Q1 2026. The company posted 9% year-on-year growth, increasing its market share to 37% - its highest quarterly level since Q1 2023.

Xiaomi ranked second with 6 million shipments, growing 3% year-on-year and marking its sixth consecutive quarter of growth in Latin America. The vendor captured a 17% market share.

Motorola secured third place despite a 5% decline in shipments to 4.9 million units, giving it a 14% market share. Omdia attributed the drop primarily to a 37% fall in ship-

ments of devices priced between US\$100 and US\$200.

Honor consolidated its position in fourth place after posting 30% year-on-year growth to 3.4 million units and securing a 10% market share. Growth was driven largely by the success of its entry-level Play 10 device, which sold around half a million units during the quarter.

Apple rounded out the top five vendors with 31% year-on-year shipment growth, supported by strong demand in Mexico for its iPhone 17 range.

Looking ahead, Omdia expects the Latin American smartphone market to face increasing pressure as retailers gradually pass rising component costs onto consumers, particularly in the sub-US\$300 segment.

Southeast Asia smartphone market declines as rising memory costs push up prices

The Southeast Asian smartphone market declined 9% year-on-year in the first quarter of 2026, as vendors raised device prices to protect margins amid rising memory chipset costs.

According to analyst firm Omdia, smartphone shipments in the region fell to 21.6 million units from 23.7 million a year earlier. At the same time, average selling prices (ASP) hit a record \$349, up 19%, driven largely by higher RAM and memory component costs.

Omdia warned that memory chipset prices are expected to continue rising throughout 2026, increasing affordability pressure in Southeast Asia, where more than 60% of smartphones sold are priced below \$200.

Samsung remained the region's largest vendor with 4.6 million shipments and a 21% market share, supported by strong demand for its Galaxy S26 and A-series devices.

Opportunity ranked second with 4.2 million shipments, down

17%, partly impacted by realme officially rejoining the company as a sub-brand earlier this year.

Xiaomi took third place with 3.7 million units shipped, down 12%, as price increases across its portfolio weighed on volumes.

Transsion, which owns the Infinix and Tecno brands, recorded a 10% decline to 3.4 million units shipped.

Vivo completed the top five with 2.1 million shipments, suffering the steepest decline among the major vendors at 27%, after scaling back its focus on entry-level smartphones.

Apple ranked sixth with 1.8 million shipments and flat year-on-year growth, as the iPhone 17 saw fewer discounts compared to previous generations.

Honor was one of the few brands to post strong growth, with shipments rising 28% to 1.2 million units despite the wider market downturn.

Omdia Research Manager Le Xuan Chiew said the key trend in the quarter was the combination of record-high smartphone prices and declining shipment volumes, driven largely by rising memory costs. He added that vendors are also tightening supply management to avoid aggressive discounting across retail channels.

Huawei retains lead in China smartphone market, Apple shipments surge in first quarter

Huawei Technologies claimed the top spot in China's smartphone market in the first quarter with its highest share in five years, while Apple saw the strongest growth among the top six players, despite a global memory chip crunch.

Huawei held a 20 per cent share in the first three months, the highest since the fourth quarter of 2020, according to a Friday report by Counterpoint Research. Chinese government subsidies that offered a 15 per cent discount for gad-

gets under 6,000 yuan (US\$880), along with promotions during the Chinese New Year in February, supported the strong performance, the research firm said.

The company's "heavy reliance on domestic suppliers provides a good cost buffer amid the global memory price surge", the report said.

Last year, Huawei edged out Apple to reclaim the No 1 spot in mainland China's smartphone market, according to IDC in January.

Apple ranked second in the first quarter with a 19 per cent share, boosted by a 20 per cent surge in shipments, the largest growth among the top six brands. This was driven by "sustained strong performance of the iPhone 17 series, promotional price cuts and government subsidies", according to Counterpoint Research.

Apple might be the "best positioned to navigate the ongoing global memory crunch, supported by its premium product portfolio and strong supply chain management", the report said, adding that the American tech giant was "more likely to absorb rising costs internally and expand its market share" in the near-to-medium term.

Ericsson to build 5G network for ICE Costa Rica

The Instituto Costarricense de Electricidad (ICE), the Costa Rican government-run electricity and telecommunications services provider, has awarded a contract relating to its 5G network to tech giant Ericsson.

The precise details of the contract have not yet been outlined and Ericsson has not formally announced the deal. However, it does not appear to include base station radios, for which a company called Coasin-Nokia has been awarded the contract to supply the equipment and connectivity services.

The network is to be commercially launched under the ICE Kölbi brand. ICE estimates that the rollout will be implemented over the next 12 months and says it will employ open RAN standalone architecture, which, it points out, allows multiple manufacturers to be added to provide services and supply equipment, and eliminates dependence on a single company.

According to ICE, the final cost of the award was US\$100 million below the originally planned budget, which it had estimated at US\$250 million.

Announcing this deal, Marco Acuña, president of Grupo ICE also highlighted the company's work in increasing international connectivity with the TAM-1 submarine cable as well as its investments in Kölbi to date of more US\$220 million.

As we reported last year, the Trans Americas Fiber Systems submarine cable (TAM-1), which started commercial operations in the fourth quarter of 2025, travels 7,000 kilometres along the Atlantic coast, from the United States to South America.

While this award is good news for ICE, the country's private operators are already way ahead with coverage and expansion. As the BNamericas news service points out, both Claro and Liberty already have coverage in the San José metropolitan area and other major cities, and are moving forward with a nationwide rollout.

Claro began the rollout of its 5G network in the second half of 2025; by the end of December it covered 35.3% of the population.

Liberty Costa Rica commercially launched the first sites of its 5G network across multiple regions in March using gear from Ericsson, with plans to achieve national coverage before the end of this year.

As we reported at the time, Liberty's 5G network will initially focus on tourist and commercial centres in Guanacaste, the Central Pacific and the Northern Zone.
